Subject index of Volume 92*

Boundary element methods

Free and forced vibrations of shallow shells by boundary and interior elements, C.P. Providakis and D.E. Beskos (1) 55– 74
A variational approach to boundary element elastodynamic analysis and extension to multidomain problems, G. Maier, M. Diligenti and A. Carini (2) 193–213

Calculus of variations

A mixed-variational approach for the analysis of circular plate-elastic halfspace interaction, M.O. Faruque and M. Zaman (1) 75– 86

Dynamics

Free and forced vibrations of shallow shells by boundary and interior elements, C.P. Providakis and D.E. Beskos (1) 55– 74
A variational approach to boundary element elastodynamic analysis and extension to multidomain problems, G. Maier, M. Diligenti and A. Carini (2) 193–213
An efficient computational method for real time multibody dynamic simulation in fully cartesian coordinates, E. Bayo, J. García de Jálon, A. Avello and J. Cuadrado (3) 377–395

Elasticity

A theoretical solution for the buckling of sandwich panels with laminated face plates using a computer algebra system, J.P.H. Webber and I.B. Stewart (3) 325–341

Finite difference methods

A low dispersion and bounded convection scheme, J. Zhu and W. Rodi (1) 87– 96

Finite element and matrix methods

A catenoidal patch test for the inextensional bending of thin shell finite elements, A. Kamoulakos (1) 1– 32
Generalization of the plastic node method, Y. Ueda and M. Fujikubo (1) 33– 53

* The issue number is given in front of the page numbers.

On the computation of normal modes of a rotating, viscous incompressible fluid with a capillary free boundary, R.M.S.M. Schulkes and C. Cuvelier (1) 97 – 120
Continuum damage mechanics and local approach to fracture: Numerical procedures, A. Benallal, R. Billardon and J. Lemaitre (2) 141 – 155
On element-by-element preconditioning for general elliptic problems, H.-C. Lee and A.J. Wathen (2) 215 – 229
Simulations of solitons using quadratic spline finite elements, L.R.T. Gardner, G.A. Gardner and A.H.A. Ali (2) 231 – 243
A method for determining free surfaces in steady state finite element computations, J.L. Chenot, P. Montmitonnet, A. Bern and C. Bertrand-Corsini (2) 245 – 260
Automatic mesh generator with specified boundary, P.L. George, F. Hecht and E. Saltel (3) 269 – 288
An improved cubic Petrov – Galerkin method for simulation of transient advection – diffusion processes in rectangularly decomposable domains, E.T. Bouloutas and M.A. Celia (3) 289 – 308
A finite element adaptive-refinement strategy for the capillary surface problem, S. Saha, P.C. Das and N.N. Kishore (3) 343 – 352
A mixed formulation for frictional contact problems prone to Newton like solution methods, P. Alart and A. Curnier (3) 353 – 375

Fluid mechanics

A low dispersion and bounded convection scheme, J. Zhu and W. Rodi (1) 87 – 96
On the computation of normal modes of a rotating, viscous incompressible fluid with a capillary free boundary, R.M.S.M. Schulkes and C. Cuvelier (1) 97 – 120

Fracture mechanics

Continuum damage mechanics and local approach to fracture: Numerical procedures, A. Benallal, R. Billardon and J. Lemaitre (2) 141 – 155

General Rayleigh – Ritz and Galerkin techniques

Simulations of solitons using quadratic spline finite elements, L.R.T. Gardner, G.A. Gardner and A.H.A. Ali (2) 231 – 243

Kinematics

An efficient computational method for real time multibody dynamic simulation in fully cartesian coordinates, E. Bayo, J. García de Jálon, A. Avello and J. Cuadrado (3) 377 – 395

Matrix calulus

On element-by-element preconditioning for general elliptic problems, H.-C. Lee and A.J. Wathen (2) 215 – 229

Miscellaneous topics

An algorithm for form error evaluation – using the theory of discrete and linear Chebyshev approximation, P.B. Dhanish and M.S. Shunmugam (3) 309 – 324

Nonlinear mechanics

Constitutive laws and force recovery procedures in nonlinear analysis of trusses, Y.-B. Yang and L.-J. Leu (1) 121 – 131
Continuum damage mechanics and local apprach to fracture: Numerical procedures, A. Benallal, R. Billardon and J. Lemaitre (2) 141 – 155
Simulations of solitons using quadratic spline finite elements, L.R.T. Gardner, G.A. Gardner and A.H.A. Ali (2) 231 – 243
A method for determining free surfaces in steady state finite element computations, J.L. Chenot, P. Montmitonnet, A. Bern and C. Bertrand-Corsini (2) 245 – 260
A finite element adaptive-refinement strategy for the capillary surface problem, S. Saha, P.C. Das and N.N. Kishore (3) 343 – 352
A mixed formulation for frictional contact problems prone to Newton like solution methods, P. Alart and A. Curnier (3) 353 – 375
An efficient computational method for real time multibody dynamic simulation in fully cartesian coordinates (3) 377 – 395

Numerical solution procedures

On element-by-element preconditioning for general elliptic problems, H.-C. Lee and A.J. Wathen (2) 215 – 229
Simulations of solitons using quadratic spline finite elements, L.R.T. Gardner, G.A. Gardner and A.H.A. Ali (2) 231 – 243
Automatic mesh generator with specified boundary, P.L. George, F. Hecht and E. Saltel (3) 269 – 288
A mixed formulation for frictional contact problems prone to Newton like solution methods, P. Alart and A. Curnier (3) 353 – 375

Plasticity

Generalization of the plastic node method, Y. Ueda and M. Fujikubo (1) 33 – 53
A method for determining free surfaces in steady state finite element computations, J.L. Chenot, P. Montmitonnet, A. Bern and C. Bertrand-Corsini (2) 245 – 260

Shells and plates

A catenoidal patch test for the inextensional bending of thin shell finite elements, A. Kamoulakos (1) 1 – 32
Free and forced vibrations of shallow shells by boundary and interior elements, C.P. Providakis and D.E. Beskos (1) 55 – 74
A mixed-variational approach for the analysis of circular plate-elastic halfspace interaction, M.O. Faruque and M. Zaman (1) 75 – 86
Buckling and post-buckling of annular plates in shearing, Part I: Buckling, Cheng Chang-jun and Lui Xiao-an (2) 157 – 172
Buckling and post-buckling of annular plates in shearing, Part II: Post-buckling, Cheng Chang-jun and Lui Xiao-an (2) 173 – 191

Solution of differential equations

An improved cubic Petrov–Galerkin method for simulation of transient advection–diffusion processes in rectangularly decomposable domains, E.T. Bouloutas and M.A. Celia (3) 289 – 308
A finite element adaptive-refinement strategy for the capillary surface problem, S. Saha, P.C. Das and N.N. Kishore (3) 343 – 352

Spline approximation

Simulations of solitons using quadratic spline finite elements, L.R.T. Gardner, G.A. Gardner and A.H.A. Ali (2) 231 – 243

Stability in structural mechanics

Buckling and post-buckling of annular plates in shearing, Part I: Buckling, Cheng Chang-jun and Lui Xiao-an (2) 157 – 172
Buckling and post-buckling of annular plates in shearing, Part II: Post-buckling, Cheng Chang-jun and Lui Xiao-an (2) 173 – 191
A theoretical solution for the buckling of sandwich panels with laminated face plates using a computer algebra system, J.P.H. Webber and I.B. Stewart (3) 325 – 341

Structural mechanics

Generalization of the plastic node method, Y. Ueda and M. Fujikubo (1) 33 – 53
Constitutive laws and force recovery procedures in nonlinear analysis of trusses, Y.-B. Yang and L.-J. Leu (1) 121 – 131
A variational approach to boundary element elastodynamic analysis and extension to multidomain problems, G. Maier, M. Diligenti and A. Carini (2) 193 – 213
A theoretical solution for the buckling of sandwich panels with laminated face plates using a computer algebra system, J.P.H. Webber and I.B. Stewart (3) 325 – 341

Subsonic flow

An improved cubic Petrov–Galerkin method for simulation of transient advection–diffusion processes in rectangularly decomposable domains, E.T. Bouloutas and M.A. Celia (3) 289–308

Systems of linear and nonlinear simultaneous equations

On element-by-element preconditioning for general elliptic problems, H.-C. Lee and A.J. Wathen (2) 215–229

Transport phenomena

A low dispersion and bounded convection scheme, J. Zhu and W. Rodi (1) 87– 96

Viscoelastic and viscoplastic media

A method for determining free surfaces in steady state finite element computations, J.L. Chenot, P. Montmitonnet, A. Bern and C. Bertrand-Corsini (2) 245–260

Viscous flow

On the computation of normal modes of a rotating, viscous incompressible fluid with a capillary free boundary, R.M.S.M. Schulkes and C. Cuvelier (1) 97–120

Wave motion

Simulations of solitons using quadratic spline finite elements, L.R.T. Gardner, G.A. Gardner and A.H.A. Ali (2) 231–243
